Solution to this would be to use some other mechanism than frequency shift of throttling of solar output (and this would probably bring other benefits), but that does not seem to be the way the industry is moving at the moment. Of course the other option is 3 phase solar and battery inverters that can supply different loads to different phases ...

For example, in a solar power plant, a three-phase inverter is used to convert the DC power generated by the solar panels into AC power that can be fed into the grid.
