I'd like to receive news and commercial info from Schneider Electric and its affiliates via electronic communication means such as email, and I agree to the collection of information on the opening and clicks on these emails (using invisible pixels in the images), to measure ...

I have a BR1500G that stopped functioning properly after a battery replacement (genuine APC replacement battery). I made a post a while back about the primary symptom (battery will charge, but not stay charged), but I've realized that a major symptom is that the unit will not power on without a battery attached.

I recently acquired a slightly used Smart-UPS 1500 that had a bad battery in it. I replaced the battery with a new one, plugged the unit in and powered it on to fully charge the battery. The unit had been plugged in and powered on for about a week with no loads (no devices plugged into the unit). The...

Issues: There are many possible scenarios in which a Back-UPS product might drop or reboot the attached equipment. Make a list of all the equipment that is being plugged into the Back-UPS product. The rest should be plugged into the surge only outlets that do not provide battery backup. Once pushed back in, try to power the unit up again. In some cases, ...

I've seen this happen when the power quality is rather low, and the unit has switched to battery quite often. Its battery monitoring logic can become confused. Try resetting ...

This APC UPS on the other hand was connected to other Dell boxes and worked fine. So in that sense, this APC UPS has never been connected with this Dell box. I have another PC but it draws considerably more power though and currently connected to an APC Back-UPS Pro 1300. I can try testing the UPS with my other computer but will have to be later.

The unit does not provide the expected amount of backup time. Battery Backup outlets may be fully or improperly loaded. Disconnect non-essential equipment from the BATTERY BACKUP outlets and connect the equipment to SURGE ONLY outlets. The battery was recently discharged due to a power outage and has not fully recharged.

Apc battery backup 1500 has no power

What it is: Your APC battery backup should always be connected to a power source. That way, the battery will remain charged until a power outage occurs. When that happens, the battery will continue supplying electricity to your crucial devices to keep them operational.

Doing that will allow the UPS to detect the battery inside and monitor its status. Read: [How To Check UPS Battery Health? Battery Is Worn-Out Or Faulty](#). What it is: A typical backup battery that you'd find in an APC UPS ...
