Temperature: Solar panels are more efficient at converting sunlight into electricity when they operate at cooler temperatures. While sunlight is essential for solar energy production, extreme heat can reduce efficiency by decreasing voltage and overall power output. This phenomenon, known as the negative temperature coefficient, means that as ...

Solar panels work best where they can catch the maximum amount of direct sunlight each day. In North America, this occurs at a 15 to 45-degree angle facing south. North-south angled roofs are the best for solar with panels mounted on the south-facing side. Custom mounting racks can help you achieve the best angle to catch some sun.

**YOUR SOLAR SITE EVALUATION.** After you've done some basic solar research and come up with a short list of solar installation companies to consider, the next step will be scheduling a site visit or evaluation. This is a requisite for an accurate solar panel quote and to determine the correct solar system design for your property.
