

Backup camera power wire

The wiring for a backup camera typically consists of a power wire, a ground wire, a video signal wire, and sometimes an audio signal wire. It's important to follow the manufacturer's instructions for your specific camera model, as the wiring configuration may vary slightly.

1. Long video wire with red (power) thin wires coming off of each end of the video wire for simplicity lets call this wire VIDEO 2. Short (about 3 feet) power wire that has male connector into camera power. The other end of this wire splits into red and black thin wires. For simplicity we'll call it POWER wire. 3.

Step 3: After stripping the wire, connect the red power wire from the backup camera to the positive side of the reversing light wire using a butt connector or soldering iron. Then, connect the black ground wire from the camera to the vehicle's grounding point.

Discover DIY guides with Keystone RV for installing a backup camera on your prepped RV. Follow step-by-step instructions for a seamless upgrade. ... those wires supply power to the camera when the 7-way cord is plugged into the tow vehicle. ...
