# Battery storage energy management

How do battery energy storage systems work? Simply put, utility-scale battery storage systems work by storing energy in rechargeable batteries and releasing it into the grid at a later time to deliver electricity or other grid services. Without energy storage, electricity must be produced and consumed at exactly the same time.

With the economics moving in this direction and more jurisdictions opening their energy markets, there are big opportunities for owners and operators of commercial and industrial facilities. Energy storage can improve your bottom line, empowering you to sell energy back to the grid while slashing electricity costs.
