Lead Acid Batteries. Lead acid batteries were once the go-to choice for solar storage (and still are for many other applications) simply because the technology has been around since before the American Civil War. However, this battery type falls short of lithium-ion and LFP in almost every way, and few (if any) residential solar batteries are made with this chemistry.

Solar batteries generally only last five to 15 years, compared with a 25-year life span of solar panels, so you'll likely need to replace your battery during the lifetime of your solar panels. 9. A solar storage battery is not the same as a solar power battery bank

Solar-powered batteries store excess electricity for use at night, during power outages, or when utility rates are high. They help expand your solar energy system's efficiency and offer additional long-term energy savings.

Batteries aren't for everyone, but in some areas, a solar-plus-storage system can offer higher long-term savings and faster break-even on your investment than a solar-only system. The median battery cost on EnergySage is \$1,133/kWh of stored energy .
