The progress made on applications of solar energy, wind energy, the kinetic forces of waves and geothermal energy are very briefly described. The connection to desalination methods, a rather new achievement, is also briefly presented with some examples. Keywords: Renewable energies; History; Solar energy; Wind energy; Waves; Geothermal energy 1.

For the storage tank of 9 m<sup>3</sup>, the mean thermal efficiencies in December and in June are found to be 37.1% and 68.7% respectively, while the mean exergetic efficiencies 2.0% and 8.5% respectively. Moreover, it is proved that the Input/Output performance method in concentrating collectors has to take into consideration the solar incident angle ...

An attempt is made to analyze the world-wide reserves of fossil fuel and the impact of the increasing exploitation to the exhaustion rate. The importance of renewable and/or ...

Dr. Vassilis Belessiotis is Emeritus Director of Research at the "DEMOKRITOS" National Center for Scientific Research. He has been the founder and Head of the "Solar & other Energy Systems Laboratory" from 1983 to 2019, the first Laboratory of an Academic Institution in Europe to be accredited, originally under the EN 45001 Standard, then under ISO IEC 17025.
