The rise of renewable energy. Renewable energy is slowly replacing fossil fuels. In 2015 renewables in the UK generated more power than coal for the first time ever, and by 2018 was approaching the level of gas generation. It's also getting much cheaper. Wind power now costs far less than nuclear, and between 2015 and 2017 the price of offshore wind halved.

The type, size, and location of renewable energy (RE) deployment dramatically affects benefits to climate and health. Here, we develop a ten-region model to assess the magnitude of health and climate benefits across the US. We then use this model to assess the benefits of deploying varying capacities of wind, utility-scale solar photovoltaics (PV), and ...
