Overall, reviews indicate that Blue Works is a reliable choice for your pool sanitization needs. If you have a Hayward salt cell and it is not reading the salt level correctly, there are several potential causes. The most common cause is that the sensor may need to be cleaned or replaced due to buildup of calcium deposits or other debris.

Your salt water pool system has a special feature that other pools often don't have. The feature is a water flow sensor that is inside the piping that draws attention to low water flow or no water flow so that the salt cell can immediately be shut down. In this case, the salt chlorinator will not produce chlorine and it does this to protect ...

Press the "MENU" button until the system's cell type is displayed When viewing the cell type, press the arrow keys or, to program the system to correct cell type.
