

The paper explores strategies to enhance the energy storage efficiency (i) of relaxor- ferroelectric (RFE) ceramics by tailoring the structural parameter tolerance factor (t), ...

In this study, an innovative approach is proposed, utilizing an ultra-thin multilayer structure in the simple sol-gel made ferroelectric/paraelectric BiFeO₃/SrTiO₃ (BF/ST) system ...

Ultrahigh-power-density multilayer ceramic capacitors (MLCCs) are critical components in electrical and electronic systems. However, the realization of a high energy ...

An acetic-acid-based sol-gel method was used to deposit lead lanthanum zirconate titanate (PLZT, 8/52/48) thin films on either platinized silicon (Pt/Si) or nickel buffered by a lanthanum nickel oxide buffer layer (LNO/Ni). X-ray diffraction and scanning electron microscopy of the samples revealed that dense polycrystalline PLZT thin films formed without apparent ...

Energy Storage Materials. Volume 26, April 2020, Pages 242-249. ... We used a simple three step procedure of spray coating a ceramic thin film under 25 mm thick, sintering to achieve a necked morphology, and backfilling the ceramic with a polymer electrolyte to create the composite. The sintered ceramic formed a three-dimensional, fully ...

Summary <p>This chapter presents a timely overall summary on the state-of-the-art progress on electrical energy-storage performance of inorganic dielectrics. It should be noted that, compared with bulk ceramics, dielectrics in thin and thick-film form usually display excellent electric field endurance, ...

Among currently available energy storage (ES) devices, dielectric capacitors are optimal systems owing to their having the highest power density, high operating voltages, and a long lifetime. Standard high-performance ferroelectric-based ES devices are formed of complex-composition perovskites and require precision, high-temperature thin-film fabrication. The discovery of ...

Recently, film capacitors have achieved excellent energy storage performance through a variety of methods and the preparation of multilayer films has become the main way to improve its energy ...

Materials offering high energy density are currently desired to meet the increasing demand for energy storage applications, such as pulsed power devices, electric vehicles, high-frequency inverters, and so on. Particularly, ceramic-based dielectric materials have received significant attention for energy storage capacitor applications due to their ...

In this study, the energy storage properties of relaxor Pb_{0.92}La_{0.08}(Zr_{0.52}Ti_{0.48})O₃ (PLZT) thin films grown on Pt/Si substrates using pulsed laser deposition (PLD) and sol-gel methods were ...

Dielectric ceramic capacitors, with the advantages of high power density, fast charge-discharge capability, excellent fatigue endurance, and good high temperature stability, have been acknowledged to be promising candidates for solid-state pulse power systems. This review investigates the energy storage performances of linear dielectric, relaxor ferroelectric, ...

In this work, an exceptional room-temperature energy storage performance with $W_r \sim 86 \text{ J cm}^{-3}$, $\eta \sim 81\%$ is obtained under a moderate electric field of 1.7 MV cm^{-1} in $0.94(\text{Bi}, \text{Na})\text{TiO}_3$ - 0.06BaTiO_3 (BNBT) thin films composed of super-T polar clusters embedded into normal R and T nanodomains. The super-T nanoclusters with a c/a ratio up to ~ 1.25 are ...

PDF | On Jul 1, 2017, A. Lahmar and others published Energy storage property of Lead-free $\text{Na}_{0.5}\text{Bi}_{0.5}\text{TiO}_3$ ceramic and thin film | Find, read and cite all the research you need on ResearchGate

The energy storage density of ceramic bulk materials is still limited (less than 10 J/cm^3), but thin films show promising results (about 10^2 J/cm^3). Finally, the paper also highlights some recommendations for the future development and testing of ceramics dielectrics for energy storage applications which include investigation of performance ...

The new ceramic-based film is a vital material for emerging energy fields such as lithium batteries, solar power generation, fuel cells, thermoelectric conversion, and waste heat utilization [1], [2]. Several research attempts have been made to develop ceramics-based materials/systems for energy-harvesting applications [3], [4]. Smart films refer to materials that ...

Here, we propose a strategy to increase the breakdown electric field and thus enhance the energy storage density of polycrystalline ceramics by controlling grain orientation.

Zhu, H. et al. Increasing energy storage capabilities of space-charge dominated ferroelectric thin films using interlayer coupling. *Acta Mater.* 122, 252-258 (2017). Article CAS Google Scholar

Antiferroelectric thin films have attracted blooming interest due to their potential application in energy storage areas. $\text{Pb}(1-3x/2)\text{La}_x\text{HfO}_3$ (PLHO- x , $x = 0-0.05$) thin films were fabricated on $\text{Pt}(111)/\text{TiO}_2/\text{SiO}_2/\text{Si}$ substrates via the chemical solution deposition method. The x-ray diffraction and high-resolution transmission electron microscopy results show that the ...

Lead lanthanum zirconate titanate ceramic thin films for energy storage. *ACS Appl Mater Interfaces* 2013, 5: 1474-1480. Google Scholar [197] Lin Z, Chen Y, Liu Z, et al. Large energy storage density, low energy loss and highly stable $(\text{Pb}_{0.97}\text{La}_{0.02})(\text{Zr}_{0.66}\text{Sn}_{0.23}\text{Ti}_{0.11})\text{O}_3$ antiferroelectric thin-film capacitors.

We have successfully fabricated large area free standing polyvinylidene fluoride - $\text{Pb}(\text{Zr } 0.52 \text{ Ti } 0.48)\text{O}_3$ (PVDF-PZT) ferroelectric polymer-ceramic composite (wt% 80-20, respectively) thick films with an average diameter (d) ~ 0.1 meter and thickness (t) ~ 50 nm. Inclusion of PZT in PVDF matrix significantly enhanced dielectric constant (from 10 to 25 at 5 ...

Electrical performances can be enhanced through Ni^{2+} substitution in $\text{Na } 0.5 \text{ Bi } 0.5 \text{ TiO}_3$ (NBT) ceramic thin film. The microstructure, leakage, ferroelectric and energy-storage performances as well as dielectric properties of Ni^{2+} -doped NBT were investigated and discussed. The perovskite structure can be maintained well in spite of various compositions.

In this work, we have developed flexible energy-storage ceramic thick-film structures with high flexural fatigue endurance. The relaxor-ferroelectric $0.9\text{Pb}(\text{Mg } 1/3 \text{ Nb } 2/3)\text{O}_3$ - 0.1PbTiO_3 ...

This includes exploring the energy storage mechanisms of ceramic dielectrics, examining the typical energy storage systems of lead-free ceramics in recent years, and providing an outlook on the future trends and prospects of lead-free ceramics for advanced pulsed power systems applications. ... Thin films, polymer-based thick films and bulk ...

Fig.4. P-E hysteresis loops of both ceramic and thin film measured at room temperature. C. Energy storage density investigation The literature survey showed that the antiferroelectric

Accordingly, work to exploit multilayer ceramic capacitor (MLCC) with high energy-storage performance should be carried in the very near future. Finding an ideal dielectric material with giant relative dielectric constant and super-high electric field endurance is the only way for the fabrication of high energy-storage capacitors.

Here we report record-high electrostatic energy storage density (ESD) and power density, to our knowledge, in HfO_2 - ZrO_2 -based thin film microcapacitors integrated into ...

In this work, it is the first time as far as we know to study the effect of A-site Ni doping on the energy storage performance of BTO. The Ni-doped BTO (BN_xT , $x = 0, 0.02, 0.04, 0.06, 0.08$) thin films were synthesized by sol-gel and spin-coated method, the structure, ferroelectric, dielectric and energy storage properties of these films were investigated, and the ...

Dielectric materials find wide usages in microelectronics, power electronics, power grids, medical devices, and the military. Due to the vast demand, the development of advanced dielectrics with high energy storage capability has received extensive attention [1], [2], [3], [4]. Tantalum and aluminum-based electrolytic capacitors, ceramic capacitors, and film ...
