A cold room allows precise control of temperatures in commercial spaces where constant and efficient refrigeration or freezing is needed. Food or chemical storage means extended temperature control for perishable or unstable materials, lowering degraded rates, and the assurance the items will remain in optimal

condition.

A cold room is equipped with refrigeration systems that control and regulate the temperature inside the enclosed space. They come in different sizes and configurations, ranging from small walk-in refrigerators to large warehouse-sized cold storage facilities. The temperature in a cold room can be adjusted based on the specific requirements of the items being stored.
