Cold water storage tanks are widely used at farms to store water for irrigation and to feed and wash livestock. They are essential in these agricultural settings because some farms can be far from a water source or in drought-prone areas. All tanks will vary in size and capacity depending on the scale of operations and the customer's needs.

Water storage tanks made of carbon welded steel are strong and durable, but they don't carry the chance of Lyme leaching that concrete does.. This type of tank is versatile, both in construction and in use. Choose from stainless or galvanized steel tanks. And use them for fire protection, potable water, wastewater, and more.

All new cold water storage tanks must comply with Byelaw 30 which is all about protecting the stored water from contamination; usually all new tanks are clearly marked as complying and come with the required fittings. Getting a new cold water tank into the roof space can be a problem if the loft hatch is too small for a new tank to pass through.

The volume, capacity or size of the cold water storage tank will depend on the usage and demand and to accommodate for potential emergencies. These factors will assist you in sizing cold water storage tanks. The contractor or engineer will normally work this out for you, depending on what the water storage tank will be used for.

Cold water storage tank

Temperature Monitoring; To comply with Regulation 4(1)a and prevent Legionella growth, cold water tanks should maintain temperatures below 20°C. The Legionella bacteria thrives in water between temperatures of 20-45°C. Keeping the water temperature lower than this and above 60°C eliminates the threat of the bacteria.
