Flywheel Energy Storage System (FESS) is an electromechanical energy conversion energy storage device. It uses a high-speed flywheel to store mechanical kinetic energy, and realizes the mutual conversion between electrical energy and mechanical kinetic energy by the reciprocal electric/generation two-way motor. As an energy storage system, it ...

1 Introduction. Nowadays, renewable energy sources like solar, wind, tidal, biomass, or small-scale hydro-based distributed generations (DGs) are gaining popularity as clean sources of energy [1]. DGs are limited to a few kilowatts to megawatts and are interconnected at the distribution substation, distribution feeder, or to the customer load.
