As energy  $E$  is power  $P$  multiplied by time  $T$ , all we have to do to find the energy stored in a battery is to multiply both sides of the equation by time:  $E = V \cdot I \cdot T$ . Hopefully, you remember that amp hours are a measure of electric charge  $Q$  (the battery capacity). Hence, the final version of the battery capacity formula looks like this:  $E \dots$
