Abstract Recently, there has been a considerable decrease in photovoltaic technology prices (i.e. modules and inverters), creating a suitable environment for the deployment of PV power in a novel economical way to heat water for residential use. Although the technology of TES can contribute to balancing energy supply and demand, only a few studies have ...

The worldwide increasing energy consumption resulted in a demand for more load on existing electricity grid. The electricity grid is a complex system in which power supply and demand must be equal at any given moment. Constant adjustments to the supply are needed for predictable changes in demand, such as the daily patterns of human activity, as well as unexpected ...
