

Dual system power supply

For a quick and simple dual power supply, use two resistors in series connected in parallel with two capacitors. Connect the two ends to the battery or power source and BAM! You have a dual power supply. Typical values for bipolar converters like this are 100k-1M for the resistors and 47uf to 4700uf depending on the current draw of your circuit.

Introducing unique possibilities with the new Phanteks Revolt X Series, the first dual-system power supplies. They're able to support a secondary system and power it individually thanks to Phanteks' patented technology. The Revolt X series power supplies provide 80 PLUS Platinum efficiency, Hybrid mode for quiet operation, and fully modular cables.

The IC Regulated power supply (RPS) is one kind of electronic circuit, designed to provide the stable DC voltage of fixed value across load terminals irrespective of load variations. The main function of the regulated power supply is to convert an unregulated alternating current (AC) to a steady direct current (DC).

A circuit that connects your computer's components to the power supply. That's it. Power supplies typically have a few different rails, usually positive and negative 12V, 5V, and 3.3V, and all are necessary for your computer to function, but only the 12V rail is taken into account when classifying PSUs as single or multi-rail.

More power is guaranteed whenever a dual DC power supply is engaged, compared to a single power source. Just like supply frequency, it multiplies the power supply by 2. Pocket-Friendly. A dual DC power supply is less expensive. Dual DC power supply is cheaper than running on a single power supply.

The HTC 30 V 2 A Dual Output DC Regulated Power Supply (DC-3002-II) is a low ripple high regulation precision instrument that is particularly suitable for experimental development and low voltage applications. Its unique feature is overload protection, which makes it a safe power source for testing electronic equipment.

The objective of this project is to convert 220V AC supply in to +12V and -12v DC supply, that is why it is named Dual Power Supply as we get positive and negative 12v power supply at the same time.. This can be achieved in simple three steps: Firstly, 220V AC is converted into 12V AC by using simple step-down (220V/12V) transformer.
