The systems work efficiently with our solutions to filter power ...

Traditional online UPS systems create AC from the DC battery, but they use step-up transformers to increase low-voltage AC from the inverter to a higher voltage level that is suitable for the load (such as 120 volts AC to power a 1U server). Transformer-based UPS systems can range from modest 8 kVA to colossal 800 kVA systems.

Power Kits offer you a safe, 48V power solution for your van. A 48V system produces the same amount of power, but unlike 12Vs, only a quarter of the electric current passes through the wires, producing significantly
