SESS can be achieved by using demand response management (DRM), i.e., by aggregating thermostatically controlled loads using state-of-art smart grid technologies. In this paper, the air conditioners (ACs) are aggregated into a virtual energy storage system (VESS) by employing an electric model of the ACs.

A large share of peak electricity demand in the energy grid is driven by air conditioning, especially in hot climates, set to become a top driver for global energy demand in ...

For new construction only, thermal storage, can help reduce energy costs 10-20% and gain up to 10 points. The ASHRAE Standard is based on energy cost savings, not energy savings. So cost is the metric to drive technology choices such as thermal energy storage in new construction. This diagram shows the components of a thermal ice storage unit.

For energy demand management and sustainable approach to intelligent buildings, Carrier propose Thermal Energy Storage technology (TES) by latent heat. Shift your electricity consumption from peak to off peak hours. The TES technology consists of Phase Change Materials (PCM) used to store in nodules the cooling thermal energy produced by chillers.
