Stretchable batteries, which store energy through redox reactions, are widely considered as promising energy storage devices for wearable applications because of their high energy density, low discharge rate, good long-term stability, and lack of memory effect.

The global battery-energy storage system (ESS) market is projected to grow significantly in the coming years, driven by renewable energy sources, the rise of electric vehicle charging and related strain on the existing electrical grid, and a need for reliable power supply during peak demand periods.
