In microgrids, the ESSs can be installed in a centralized way by the utility company at the point of common coupling (PCC) in the substation [] sides, the ESSs can also be integrated in a distributed way such as plug-in electric vehicles (PEV) and building/home ESSs [17, 18] pending on the operation modes of microgrids, the ESSs can be operated for ...

The research and development of new energy storage aggregates is important for solving the ITZ problem of energy storage concrete. New energy storage aggregates that can improve the ITZ interface are acceptable, even if their addition results in low-strength energy storage concrete because the strength can be improved by adding fibres.

EES technology refers to the process of converting energy from one form (mainly electrical energy) to a storable form and reserving it in various mediums; then the stored energy can be converted back into electrical energy when needed [4], [5]. EES can have multiple attractive value propositions (functions) to power network operation and load balancing, such ...
