

This study presents an efficient method for creating high-energy-density polymer/ceramic hybrid films for dielectric energy storage applications. Graphical abstract. ... achieving compatibility between high polarization and high insulation in the dielectric film. Ultimately, the TiO₂/PVDF hybrid film achieves a high energy density of 21.9 J ...

Surface defects are the key challenges to the properties of insulation and energy storage for biaxially oriented polypropylene (BOPP) films, limiting the application of BOPP films ...

The composite film can withstand an electric field intensity of 760 MV m⁻¹; at 100 °C and obtain an energy storage density of 8.32 J cm⁻³;, while achieving a breakthrough energy storage ...

The excellent energy storage performances have been obtained by regulating the volume content of PI in P(VDF-TrFE-CFE)/PI bilayer films, which possesses a discharge energy density of 9.6 J/cm³ and ...

The large-scale development and utilisation of new energy sources have contributed to the overall development of energy storage technologies [1]. Thermal energy storage (TES) uses a storage medium to store and release thermal energy when needed [2] has been recognised as one of the most effective ways to improve energy efficiency and alleviate the ...

Wang, Y. et al. Gradient-layered polymer nanocomposites with significantly improved insulation performance for dielectric energy storage. *Energy Storage Mater* 24, 626 (2019). Article Google Scholar

Surface defects are the key challenges to the properties of insulation and energy storage for biaxially oriented polypropylene (BOPP) films, limiting the application of BOPP films in harsh environments such as high temperatures and strong electric fields. The industrial process is the main factor responsible for surface insulation defects. It is difficult to solve fundamentally in ...

Experiment and simulation verify that the construction of the trilayer structure promotes electric field redistribution, which significantly enhances high-temperature energy storage performance. At 200 °C, the energy density of the trilayer composite film is 3.81 J cm⁻³ with a charge/discharge efficiency >90 %, which is 766 % higher than ...

The growing attention towards dielectric film capacitors is due to their ability to achieve high power density with ultra-fast charge and discharge rates, making them potential candidates for use in consumer electronics and advanced pulse power supplies [1], [2]. However, achieving both high energy density (U_{re}) and energy efficiency (i) simultaneously in dielectric ...

Metallized film capacitors towards capacitive energy storage at elevated temperatures and electric field extremes call for high-temperature polymer dielectrics with high glass transition temperature (T_g), large

bandgap (E_g), and concurrently excellent self-healing ability. However, traditional high-temperature polymers possess conjugate nature and high S ...

The exceptional energy storage performance of the films is indicated by the diminished D_r at high field strength and elevated temperature. ... Building on this foundation, the dielectric properties and insulation strength undergo augmentation via a gradient distribution structure design. This design strategically utilizes the interfacial ...

These lead to an increase in the conductive current of the polymer dielectric, decrease in the charge-discharge efficiency, decrease in the energy storage density, and increase in heat production (or even thermal runaway). 5-9 This can be attributed to the deterioration of the insulation performance of the dielectric film at high temperatures ...

The discharged energy density of blend film is 2.6 times of that of pristine film, while the energy storage efficiency is 2.07 times higher than that of pristine film. The origin of enhancement in the ferroelectric energy storage properties were analyzed using FT-IR analysis and molecular mechanic simulation. FT-IR results showed g -phase of ...

The state-of-the-art biaxially oriented polypropylene (BOPP) film is insufficient to meet the growing demand for energy storage devices due to its low energy storage density and ...

Achieving high-energy storage performance of $PbZrO_3$ -based thin films utilizing insulation interlayer and low-temperature annealing. Changhai Zhang ... the problems of low breakdown strength and inferior energy storage density of PZO films have not been well solved. In this work, the insulating MgO as the blocking interlayer is inserted ...

conversion energy storage materials has attracted great interests [16-18] to approach the lower energy conversion ability of the organic PCMs and improve the utilization efficiency of solar energy, and some literatures have got excellent photo-to-thermal storage efficiencies (up to 94.5% [16], 92.1% and 90.6% [15]).

With the introduction of the inorganic layers, the energy storage performance of the t -BPB composite films is enhanced. The t -BPB-8 film obtains the maximum energy density ...

Polymer-based flexible dielectrics have been widely used in capacitor energy storage due to their advantages of ultrahigh power density, flexibility, and scalability. To develop the polymer dielectric films with high-energy storage density has been a hot topic in the domain of dielectric energy storage. In this study, both of electric breakdown strength and energy storage ...

In this paper, the effect of low temperature on biaxially oriented polypropylene (BOPP) is reported. The experimental results show that the films have the improved dielectric and energy storage properties with the ambient temperature decreasing. The highest DC breakdown strength as high as 861.9 kV/mm is obtained at

-196 °C, signifying a substantial 30.3% ...

Film dielectrics possess larger breakdown strength and higher energy density than their bulk counterparts, holding great promise for compact and efficient power systems. In ...

Experimental findings revealed that the PI-100 nm SiO₂ film exhibited an energy storage density of 3.2 J cm⁻³ at 150 °C and a field ... This research not only showcases a model for designing polyimide nanocomposites for energy storage and insulation but also offers a viable solution for their large-scale industrial production. CRediT ...

The enhancement of the energy storage property of capacitor films at elevated temperature has been considered a critical area of research owing to the essential requirements of capacitor applications. In the present study, a ternary composite system with an improved energy storage property is reported. The t

The research on thin-film energy storage has increased significantly in recent years for the miniaturization and integration of the devices. ... Al₂O₃, and HfO₂, can improve the insulation performance, and increase the breakdown strength and energy storage density [43, 86,87,88,89,90].

The most widely used biaxially oriented polypropylene (BOPP) film capacitor has an upper limit of operating temperature of only 105 °C, which is accompanied by the sacrifice of capacitance. ... The dielectric must have ultra-high insulation properties and energy storage efficiency to operate continuously in high-temperature environments. The ...

By preparing a series of bisphenol resin polymer films with different crosslinking degrees and comparing their properties, our group confirmed the promising possibility of epoxy materials ...

@article{Zhang2023RecentPI, title={Recent Progress in Polymer Dielectric Energy Storage: From Film Fabrication and Modification to Capacitor Performance and Application}, author={Tiandong Zhang and Hai Sun and Chao Yin and Young Hoon Jung and Seongwook Min and Yue Zhang and Changhai Zhang and Qingguo Chen and Keon Jae Lee ...

DOI: 10.1016/j.mtener.2022.101132 Corpus ID: 251918211; Dielectric and energy storage properties of all-organic sandwich-structured films used for high-temperature film capacitors

In combination with thermal energy storage, renewable energy technologies offer a vast potential for the supply of residential space heating and the production of domestic hot water (DHW). Space and water heating are responsible for a large portion of the energy needs of residential buildings: 79% in Europe [1] and 62% in the United States [2].

The energy storage density of the metadielectric film capacitors can achieve to 85 joules per cubic centimeter with energy efficiency exceeding 81% in the temperature range from 25 °C to 400 °C.

Energy storage insulation film

The 0.25 vol% ITIC-polyimide/polyetherimide composite exhibits high-energy density and high discharge efficiency at 150 °C (2.9 J cm⁻³, 90%) and 180 °C (2.16 J cm⁻³, 90%). This work provides a scalable design idea for high ...

(A) Energy-storage performance of the films at an electric field of 2.5 MV cm⁻¹ with respect to charge-discharge cycling numbers. (B) Temperature-dependent energy-storage performance of the films at an electric field of 2.5 MV cm⁻¹. (C) Thickness distribution curve of the eight selected sample points across the large-area film. The inset ...

An energy storage density of 15.87 J/cm³ and an efficiency of 55% were obtained at an electric field of 540 kV/mm, which is superior to those of pristine PVTC films. The results indicate that depositing a superficial insulation layer on dielectric films may be a good way to improve energy storage properties.
