Power Distribution Units (PDUs) are critical components of data centers and other mission-critical facilities that require a reliable and efficient means of distributing power to equipment. PDUs are typically mounted in server racks and cabinets and are designed to distribute power from a main power source to individual pieces of equipment.

As the energy storage device of electric vehicles, the power battery is limited by the size and arrangement of the whole vehicle. At the same time, it is necessary to ensure the convenience of maintenance of the power battery system, reduce the number of times of disassembling the power battery pack, and the high voltage box comes into being. 01
