Electrical energy storage systems (EESS) for electrical installations are becoming more prevalent. EESS provide storage of electrical energy so that it can be used later. The approach is not new: EESS in the form of battery-backed uninterruptible power supplies (UPS) have been used for many years. EESS are starting to be used for other purposes.

There are standards for photovoltaic system components, wind generation and conventional batteries. However, there are currently no IEEE, UL or IEC standards that yet pertain specifically to this new generation of integrated battery energy storage system products. The framework presented below includes a field commissioning component.

Nominal Energy [Wh]: This is the energy generated from a full charge status up to complete discharge. It is equal to the capacity multiplied by the battery voltage. As it depends on the capacity, it is affected as well by temperature and current. Power [W]: It's not easy to define the output power for a BESS, as it depends on the load ...
