capacity (i.e., kWh) of the system (Feldman et al. 2021). For example, the inverter costs scale according to the power capacity (i.e., kW) of the system, and some cost components such as the developer costs can scale with both power and energy. By expressing battery costs in \$/kWh, we

per year will be required. If we assume that one day of energy storage is required, with sufficient storage power capacity to be delivered over 24 hours, then storage energy and power of about 500 TWh and 20 TW will be needed, which is more than an order of magnitude larger than at present.
