The Environmental Protection Agency (EPA) is an independent agency of the United States government tasked with environmental protection matters. [2] President Richard Nixon proposed the establishment of EPA on July 9, 1970; it began operation on December 2, 1970, after Nixon signed an executive order. [3] The order establishing the EPA was ratified by committee ...

1.1 Global Energy Demands and Energy Storage. Currently, carbon-based nonrenewable fossil fuels (coal, petroleum, natural gas) are the dominant energy sources used globally (Covert et al. 2016). However, due to the depletion of these resources, growing energy demands, and detrimental environmental consequences, such as climate change, global warming, and ...

The International Renewable Energy Agency predicts that with current national policies, targets and energy plans, global renewable energy shares are expected to reach 36% and 3400 GWh of stationary energy storage by 2050. However, IRENA Energy Transformation Scenario forecasts that these targets should be at 61% and 9000 GWh to achieve net zero ...

Energy storage systems (ESSs) offer a practical solution to store energy harnessed from renewable energy sources and provide a cleaner alternative to fossil fuels for power generation by releasing it when required, as electricity. ... thermal (e.g., latent phase change material), and chemical (e.g., fuel cells) types, thanks to the success of ...

Chemical energy storage technology has made rapid development in recent years, but ... environmental protection, and has a broad application area and huge development potential [4].

New techniques and methods for energy storage are required for the transition to a renewable power supply, termed "Energiewende" in Germany. Energy storage in the geological subsurface provides large potential capacities to bridge temporal gaps between periods of production of solar or wind power and consumer demand and may also help to relieve the ...

The new energy economy is rife with challenges that are fundamentally chemical.
