The Milky Way is our galactic home, part of the story of how we came to be. Astronomers have learned that it's a large spiral galaxy, similar to many others, but also different in ways that reflect its unique history. Living inside the Milky Way gives us a close-up view of its structure and contents, which we can't do for other galaxies. At the same time, this perspective makes it ...

There are roughly 8-12 planets at any given time that you are allowed to play on, with the ultimate goal of liberating the planets and restoring democracy. The Galactic War status is global among all Helldivers players, and each and every Helldiver player victory contributes to liberating planets.

In a galaxy 31 million light-years away, astronomers believe they have just found evidence of a planet. After a painstaking research effort combing through thousands of signals, a team led by Rosanne Di Stefano of the Harvard & Smithsonian Center for Astrophysics has determined that a huge dip in X-ray light from the Whirlpool Galaxy is best explained by an ...

Large Scale Structures The nearly 10,000 galaxies captured in the Hubble Ultra Deep Field may look like they're randomly scattered across the sky. But galaxies, including the Milky Way, are often part of larger structures and superstructures in space. Galaxy groups and clusters are collections of galaxies bound together by gravity. They are building blocks [...]

The location of the first detected extra galactic planet in the galaxy M51. Astronomers made the discovery by examining X-ray emissions from a binary system containing a neutron star or black hole.

The discovery: A meticulous survey of planet populations finds that stars on the fringes of the Milky Way possess fewer of the most common planet types. The finding suggests that the process of planet formation - and the resulting families of planets - might differ from one galactic neighborhood to the next.

Over time, these planetesimals collide and stick together, eventually forming planets. The type, size, and location of planets that form depend on the amount of material available and how long it remains in the disk. So, the outcome of planet formation depends on the disk's evolution and dispersal.

Planet Type is a classification of a planet's biome and general environment. Different Planet Types often have different terrains in differing amounts, determining what resources the planet can provide and informing as to the kind of tiles potentially available when converted into a Core World.
