Generator power generation and energy storage

An electric generator is a device that converts a form of energy into electricity. There are many different types of electricity generators. Most electricity generation is from generators that are based on scientist Michael Faraday's discovery in 1831. He found that moving a magnet inside a coil of wire makes (induces) an electric current flow through the wire.

The mtu EnergyPack efficiently stores electricity from distributed sources and delivers on demand. It is available in different sizes: QS and QL, ranging from 200 kVA to 2,000 kVA, and from 312 kWh to 2,084 kWh, and QG for grid scale storage needs, ranging from 4,400 kVA and 4,470 kWh to virtually any size.
