Schematic microstructure and unipolar P-E loops (with a same internal electric between red, green a blue) of different dielectrics for electrostatic energy storage (evaluated by the area of red, green and blue). a) ferroelectric (FE) with macroscopic domains ($dP/dE = 0$). b) relaxor ferroelectric (RFE) with multiple polar nanoregions ($dP/dE \rightarrow 0$).

High-entropy (HE) ceramic capacitors are of great significance because of their excellent energy storage efficiency and high power density (P D). However, the contradiction between configurational entropy and polarization in traditional HE systems greatly restrains the increase in energy storage density.

China, the world leader in renewable energy, also leads in pumped storage, with 66 new plants under construction, according to Global Energy Monitor. When the giant Fengning plant near Beijing switches on its final two turbines this year, it will become the world's largest, both in terms of power, with 12 turbines that can generate 3600 ...

Against the backdrop of global energy transformation, each country is striving to tap into the renewable energy sources and drive the global growth in a green and low-carbon manner.

One of the major engineering challenges facing the green energy revolution is the need for cost-effective methods of storing energy. Energy Dome, an Italian startup, is turning to CO₂, the leading ...

FESS has a unique advantage over other energy storage technologies: It can provide a second function while serving as an energy storage device. Earlier works use flywheels as satellite attitude-control devices. A review of flywheel attitude control and energy storage for aerospace is given in [159].
