"Energy independence is one of the biggest reasons people install home battery storage systems," says Gerbrand Ceder, professor at UC Berkeley and faculty staff scientist at Lawrence Berkley National Laboratory. "It's seamless, so you don't even notice when power switches from the grid to your battery

backup system."

You don't need solar to install a home battery, but remember that batteries only store energy--they don't produce it. To truly increase your grid independence and your electric ...

When you "go solar," you get a solar panel system installed on your property--usually on your home's roof, but sometimes on your land with ground-mounted solar. Why go solar? Homeowners go solar for all sorts of reasons. Solar panels reduce your energy bills, minimize your reliance on fossil fuels, and increase your independence from your ...

Here are some of the main benefits of a home solar battery storage system. Stores excess electricity generation. Your solar panel system often produces more power than you need, especially on sunny days when no one is at home. If you don't have solar energy battery storage, the extra energy will be sent to the grid.

With your home battery storage system, your equipment will come with a standard manufacturer's warranty to protect you from any faulty equipment or issues that arise within the first few years. ...
