Tesla batteries come in four main sizes: 18650, 2170, 4680 and prismatic. The 18650 battery is the most common type of Tesla battery and it is used in various Tesla models from the original Roadster to the Model S and Model X. This type of battery has a cylindrical shape with a diameter of 18mm and a length of 65mm.

Key Takeaways. Your Tesla has one of four battery types: 18650-type, 2170-type, 4680-type, or prismatic. All Tesla batteries are lithium-ion. There are three cathode chemical makeups: NCA (nickel-cobalt-aluminum), NCM (nickel-cobalt-manganese), and LFP (lithium-iron-phosphate) for prismatic cells. Most Tesla batteries are supplied by and developed in partnership with Panasonic.
