The unit energy or power annualized cost metric is derived by dividing the total annualized cost paid each year by either the rated energy to yield \$/rated kilowatt-hour (kWh)-year or by rated power to yield \$/rated kilowatt (kW)-year, where the kWh and kW are rated energy and power of the ESS, respectively.

Let's say that our utility bill comes to the following: power consumption: You consume 1000 watts of electricity; energy price is EUR0.28/kWh; usage time is 10 hours/day; If we know that, then our electric bill estimator will tell us that we'll consume 10 kWh / day and the annual cost will be EUR1022.70.. Let's do the math by hand:
