In discussions surrounding clean energy, energy storage--specifically, batteries--is a hot topic. This is largely due to the dramatic price drop and scale-up of manufacturing for lithium-ion batteries over the last decade, which has made consumer-scale batteries more accessible and opened the door to energy storage research opportunities. ...

For the U.S to store 8 hours of electricity, it would need to deploy terawatt-hours of batteries, which would cost trillions of dollars at today's prices, while 6 weeks of seasonal heating would require petawatt-hours (thousands of TWh) of storage. Therefore, a 100% clean energy future requires not only the development of low-cost battery ...

In clean energy conversion, fuel cells directly convert the chemical energy from fuels into electricity with high efficiency and low emissions, while in clean energy storage, a battery is a typical storage device with high energy density and good reversibility and durability.

WASHINGTON, D.C. -- The Biden-Harris Administration today released the U.S. National Clean Hydrogen Strategy and Roadmap, a comprehensive framework for accelerating the production, processing, delivery, storage, and use of clean hydrogen--a versatile and flexible energy carrier that can be produced with low or zero carbon emissions. Achieving commercial ...
