Thermal Energy Storage Tank produces and stores the thermal energy in the form of chilled water during off-peak hour. During peak hour, the chilled water is pumped from the bottom of the storage tank and distributed to the facility, whilst the warmer water enters from the top of the tank hence smoothing out the energy consumption of the chiller system.

The second-generation Model C Thermal Energy Storage tank also feature a 100 percent welded polyethylene heat exchanger and improved reliability, virtually eliminating maintenance. The tank is available with pressure ratings up to 125 psi.
