Table 1. Evolution of energy storage systems. In 1839, Sir William Robert Grove invented the first simple fuel cell. He mixed hydrogen and oxygen in the presence of an electrolyte and produced electricity and water. French physicist Gaston Planté invented the first practical version of a rechargeable battery based on lead-acid chemistry.

The pumped storage power station is the most mature and widely used large-scale energy storage technology. It has the strengths of large capacity (1 million kW), long life, and low operating cost. However, the construction of a pumped storage power station is constrained by geographic conditions, and it needs suitable upper and lower reservoirs.

Finally, research fields that are related to energy storage systems are studied with their impacts on the future of power systems. Comparison of low speed and high speed flywheel [44]. Energy ...
