This review paper critically analyzes the most recent literature (64% published after 2015) on the experimentation and mathematical modeling of latent heat thermal energy storage (LHTES) systems in buildings. Commercial software and in-built codes used for mathematical modeling of LHTES systems are consolidated and reviewed to provide details on ...

Chemical energy storage systems (CES), which are a proper technology for long-term storage, store the energy in the chemical bonds between the atoms and molecules of the materials []. This chemical energy is released through reactions, changing the composition of the materials as a result of the break of the original chemical bonds and the formation of new ...

An abundant and low-cost supply of hydrogen is an indispensable requirement in achieving the goal for a viable future hydrogen economy. Japan has set price targets for the supply of low-carbon hydrogen at \$3 kg⁻¹ by 2030, declining to \$2 kg⁻¹ by 2050 [10].

TECHNOLOGY STATUS - Thermal energy storage (TES) includes a number of different technologies. Thermal energy can be stored at temperatures from -40°C to more than 400°C as sensible heat, latent heat and chemical energy (thermo-chemical energy storage), using chemical reactions. Thermal energy storage in the form of sensible heat relies

In 2019, air and sea transport, and the chemicals industry (excluding CO₂ stored in the chemicals themselves [3]) contributed 5-6% (refs. 4,5) and ~14% (ref. 6) of global CO₂ emissions ...

ESS helps in the proper integration of RERs by balancing power during a power failure, thereby maintaining the stability of the electrical network by storage of energy during off-peak time with less cost [11]. Therefore, the authors have researched the detailed application of ESS for integrating with RERs for MG operations [12, 13]. Further, many researchers have ...

Although the large latent heat of pure PCMs enables the storage of thermal energy, the cooling capacity and storage efficiency are limited by the relatively low thermal conductivity ($\sim 1 \text{ W/(m} \cdot \text{K)}$) when compared to metals ($\sim 100 \text{ W/(m} \cdot \text{K)}$). 8, 9 To achieve both high energy density and cooling capacity, PCMs having both high latent heat and high thermal ...
