This chapter discusses about metal hydride technologies for on-board reversible hydrogen storage applications. The metal hydrides such as intermetallic alloys and solid solutions have interstitial vacancies where atomic hydrogen is absorbed via an exothermic reaction; however, by endothermic path, the metal hydride desorbs the hydrogen reversibly at ...

1 Introduction. The NAtional Demonstrator for IseNtropic Energy Storage (NADINE) initiative is a joint venture by University of Stuttgart, German Aerospace Center, and Karlsruhe Institute of Technology, aiming to establish an experimental research and development (R& D) infrastructure for developing and testing thermal energy storage (TES) technologies, in collaboration ...

Lithium metal is considered to be the most ideal anode because of its highest energy density, but conventional lithium metal-liquid electrolyte battery systems suffer from low Coulombic efficiency, repetitive solid electrolyte interphase formation, and lithium dendrite growth. To overcome these limitations, dendrite-free liquid metal anodes exploiting composite solutions of alkali metals ...

In this progress report, the state-of-the-art overview of liquid metal electrodes (LMEs) in batteries is reviewed, including the LMEs in liquid metal batteries (LMBs) and the liquid sodium electrode in sodium-sulfur (Na-S) and ZEBRA (Na-NiCl₂) batteries. Besides the LMEs, the development of electrolytes for LMEs and the challenge of using ...

But when you talk about liquid metal batteries in commercial scale, the Massachusetts-based Ambri is the name that comes up. In 2010, Donald Sadoway -- the pioneer of liquid metal batteries -- together with David Bradwell and Luis Ortiz co-founded Ambri with seed money from Bill Gates and the French energy company, Total S.A.

The concept behind the liquid battery being developed by Sadoway is an exciting approach to solving the problem. Most battery research, according to Sadoway, has been focused on improving storage for portable or mobile systems such as cellphones, computers, and cars.
