Truck mobile charging stations are electric or hybrid vehicles, e.g. a truck or a van, equipped with one or more charging outlets, which can travel a distance in a certain range to charge EVs. TMCSs with and without energy storage systems are called battery-integrated TMCS and battery-less TMCS, respectively.

It is based on electric power, so the main components of electric vehicle are motors, power electronic driver, energy storage system, charging system, and DC-DC converter. Fig. 1 shows the critical configuration of an electric vehicle ( Diamond, 2009 ).
