

The Amber Kinetics flywheel is the first commercialized four-hour discharge, long-duration Flywheel Energy Storage System (FESS) solution powered by advanced technology that stores 32 kWh of energy in a two-ton steel rotor. Individual flywheels can be scaled up to tens or even hundreds of megawatts.

A mainstream choice is an electric machine like a motor/generator, such as the devices depicted in Fig. 5. The motor/generator converts the kinetic energy to electricity and vice versa. Alternatively, magnetic or mechanical gears can be used to directly couple the flywheel with the external load.

Thanks to the unique advantages such as long life cycles, high power density, minimal environmental impact, and high power quality such as fast response and voltage stability, the flywheel/kinetic energy storage system (FESS) is gaining attention recently.
