Karimi et al. [131] analyzed and assessed the effects of water, silicone oil, and air as cooling media on battery temperature. In contrast to air cooling, water, and silicone oil cooling keep the temperature of the battery within the reasonable operating range, as shown in Fig. 4 a. However, there still exists a certain T_v inside the batteries.

The cells in the module have an identical spacing of 1 mm. The thermal management system consists of two cooling plates that are placed on both sides of the module. The height of the cooling plates is the same as the battery, equal to 91 mm. The total length of the cooling plate is 400 mm, and the plate thickness is 8 mm.
