The need to use energy storage systems (ESSs) in electricity grids has become obvious because of the challenges associated with the rapid increase in renewables [1]. ESSs can decouple the demand and supply of electricity and can be used for various stationary applications [2]. Among the ESSs, electro-chemical storage systems will play a vital role in the future.

Let us understand the diagram of on-grid connected BESS. If energy is measured at the point of common coupling (PCC), the BESS capacity must be oversized to ensure that it discharges extra energy to cover the losses in DC cables from BESS to PCS, conversion losses of PCS, LV (low-voltage) cable losses from PCS to Transformer, conversion ...
