

The integration of PCMs and photothermal conversion materials can efficiently convert solar energy into thermal energy and store it in the form of latent heat. This integrated technology can achieve the goal of simultaneous solar energy utilization and efficient energy storage [1,[15], [16], [17], [18], [19]].

However, the storage forms of sun solar energy mainly include photothermal[5, 6], photoelectric[7, 8], and thermochemical energy conversion[9], of which photothermal conversion was one of the rapidly developing solar energy utilization methods in recent years, among which the more popular photothermal storage component is the thermal energy ...

The exploitation of from-stable phase change materials (PCMs) with superior energy storage capacity and excellent solar-thermal conversion performance is crucial for the efficient exploitation of...

Photothermal energy conversion and storage are crucial in solar collection systems. However, it is difficult for traditional media to balance high photothermal conversion, thermal conductivity and thermal energy storage. ... Experiment study on the thermal properties of paraffin/kaolin thermal energy storage form-stable phase change materials ...

The composite photothermal PCM has robust full-spectrum absorption and highly efficient photothermal conversion capability, realizing both thermal energy storage and photothermal conversion, and it will be expected to have a promising future in the field of solar energy storage and conversion, and human thermal therapy.

Na₃B₄O₇ reacted with PVA to form cross-linking structure around MXene, showing excellent crystallization property, nearly 100 % light-driven shape recoverability, and thermal performance. ... PCMs composited with MXene enable energy storage through a photothermal-driven phase transition conversion process [149, 150].

Compared with the thermal curing process, the photocuring process has advantages such as high efficiency and less energy consumption. However, the preparation of photocurable phase change materials (PCMs) with photothermal conversion and self-cleaning properties is challenging due to the conflict between the transparency required by the ...

A novel form-stable phase-change material with high enthalpy and long endurance for photo-thermal energy storage. Bulletin of Materials Science, 2023. 46(3): p. 146. ...

Emerging phase change material (PCM)-based photothermal conversion and storage technology is an effective and promising solution due to large thermal energy storage ...

Solar energy is a clean and inexhaustible source of energy, among other advantages. Conversion and storage

of the daily solar energy received by the earth can effectively address the energy crisis, environmental pollution and other challenges [4], [5], [6], [7]. The conversion and use of energy are subject to spatial and temporal mismatches [8], [9], such as ...

Photothermal/electrothermal advanced functional form-stable phase change materials (FSPCMs) can efficiently make use of solar energy and electrical energy by using supporting materials to ...

The development of phase change materials (PCMs) with high energy storage density, enhanced photothermal conversion efficiency and good form-stability is essential for practical application in ...

Request PDF | A Review on Microencapsulated Phase-Change Materials: Preparation, Photothermal Conversion Performance, Energy Storage, and Application | With serious energy consumption and people ...

Form-stable PCMs with high energy storage capacity are effectively used to store solar energy as heat during the phase transition process, and then release and supply continuous and stable energy when heat is needed. ...
@PEG and illustration of the effect of PW@PEG enabling an enhanced photothermal conversion, solar energy storage and thermal ...

Form-stable phase change materials based on graphene-doped PVA aerogel achieving effective solar energy photothermal conversion and storage Author links open overlay panel Lixiang Luo a, Wenxing Luo a, Wenjing Chen b, Xiaowu Hu a, Yan Ma a, Shikun Xiao a, Qinglin Li c, Xiongxin Jiang a

One important implementation of photothermal nanomaterials is the solar evaporation technology that allows steam and clean water to be produced from either seawater or wastewater, while the sustainable solar energy is collected and stored in the form of thermal, electrical, or mechanical energy. To meet the pressing demands of energy and ...

Photothermal energy conversion and storage are crucial in solar collection systems. However, it is difficult for traditional media to balance high photothermal conversion, thermal conductivity and thermal energy storage. Considering the advantages of nanofluids (volumetric absorption systems) and PCMs (high latent storage density), we develop novel ...

1 INTRODUCTION. Renewable, abundant, and clean solar energy is expected to replace fossil fuels and alleviate the energy crisis. However, intermittency and instability are the deficiencies of solar energy due to its weather and space dependence. [] Emerging phase change material (PCM)-based photothermal conversion and storage technology is an effective ...

The photosensitive isomers release the stored energy in the form of heat during the reduction process [24]. ... This paper aims to improve the photothermal energy storage performance of the composite material by preparing AZO-g-C₃N₄ material with hydrogen bonds. The isomerization enthalpy values of azobenzene derivatives and azobenzene ...

The development of phase change materials (PCMs) with high energy storage density, enhanced photothermal conversion efficiency and good form-stability is essential for practical application in utilization of solar energy. Herein, novel PCM composites (CPPCMs) with extremely high energy storage density and superb solar-thermal conversion performance were ...

Photothermal energy conversion represents a cornerstone process in the renewable energy technologies domain, enabling the capture of solar irradiance and its subsequent transformation into thermal energy. ... Photothermal energy storage materials [29] PDI/rGO film: Visible, 0.0488 W cm⁻²: 38.7 °C- ... [180] Furthermore, the elongated form of ...

Current studies show that the heat storage capacity and photothermal conversion efficiency of PCMs are important indicators for efficient storage and utilization of solar energy [15], [16], [17]. The metal organic framework (MOF) is porous crystal hybrid material formed by the connection of metal centers (clusters) and organic ligands (organic ...

Herein, a photothermal energy-storage capsule (PESC) by leveraging both the solar-to-thermal conversion and energy-storage capability is proposed for efficient anti-/deicing.

Interestingly, the wearable thin film can convert solar and electrical energy into thermal energy and store it as latent heat with a high photothermal conversion efficiency of ...

The photothermal conversion efficiency (η) is calculated as the ratio of the latent heat-storage energy to the solar irradiation energy throughout the phase-change process as follows [10]: $\eta (\%) = \frac{m D H_m A P D t}{Q_{in}} \times 100$ where m is the mass of the samples, $D H_m$ is the melting enthalpy of the samples, $D t$ is the time for the sample to ...

The high-energy photons from the solar spectrum can be absorbed by the upper MOST layer, and photochemically convert norbornadiene to quadricyclane, storing solar energy in the form of chemical energy at around 103 kJ mol⁻¹. In the meantime, the low-energy photons, accounting for 78% in the solar spectrum, will be absorbed by the lower ...

The photothermal conversion and storage mechanism of the ND/SiO₂ NEPCM is illustrated in Fig. 9, primarily attributed to the thermal vibrations of molecules combined with the optical confinement effect of the ND/SiO₂ hybrid shells, as well as the phase change thermal energy storage capacity provided by n-Octadecane. In brief, solar energy is ...

[18, 109] During the photothermal catalysis process, solar energy can be used to destroy the chemical bonds to degrade organic pollutants. At the same time, it also can generate new chemical bonds for energy storage in hydrogen (H₂), carbon oxide (CO), methane (CH₄), and so on. Therefore, photothermal catalysis can be an alternative or ...

Particularly, photothermal energy storage systems that store excess solar energy generated during the day for nighttime utilization are widely adopted. Stearic acid (SA) has garnered significant attention as a recommended PCM due to its favorable properties [5], [6], such as cost-effectiveness, high thermal storage density, non-toxicity, and ...

A novel photothermal energy storage phase change ... 25] is used for keeping PCMs in stable form (FSPCMs) to prevent leakage and improve the thermal conductivity of PCMs. For example, Zhang ...

Direct-photothermal energy conversion and storage experiment: The 300 W Xe-lamp was used as the solar simulator in the direct-photothermal energy conversion and storage experiment with the intensity adjusted from 0.5 to 2 kW/m². During the experiment, the thermocouple was attached to the surface at different positions of the SA-PCB-20 to ...

The increase of global carbon emissions is closely related to global economic growth [1], [2]. However, with the gradual increase of global awareness and determination to deal with climate change and the introduction of laws and policies to control greenhouse gas emissions, the growth rate of global greenhouse gas emissions has slowed down, and the ...

Photo-thermal conversion phase-change composite energy storage materials (PTPCESMs) are widely used in various industries because of their high thermal conductivity, ...
