The Chinese Grid Integration Project for Renewable Energy in Zhangbei This project is one of the most significant renewable energy integration projects in the world, combining solar, wind, and energy storage [63]. It has a sizable LDES component, with grid stability services provided by batteries and other storage technologies.

Solar energy is a renewable energy source that can be utilized for different applications in today's world. The effective use of solar energy requires a storage medium that can facilitate the storage of excess energy, and then supply this stored energy when it is needed. An effective method of storing thermal energy from solar is through the use of phase change ...

Although the large latent heat of pure PCMs enables the storage of thermal energy, the cooling capacity and storage efficiency are limited by the relatively low thermal conductivity ( $\sim 1 \text{ W}/(\text{m} \cdot \text{K})$ ) when compared to metals ( $\sim 100 \text{ W}/(\text{m} \cdot \text{K})$ ). 8, 9 To achieve both high energy density and cooling capacity, PCMs having both high latent heat and high thermal ...
