The PowerPICC&#174; Provena™ Catheter with SOLO™2 Valve Technology is indicated for short or long term peripheral access to the central venous system for intravenous therapy, power injection of contrast media, and allows for central venous pressure monitoring. For blood sampling, infusion, or therapy use a 4 French or larger catheter.

2 Bard Access Systems Warning: Power injector machine pressure limiting feature may not prevent over pressurization of an occluded catheter, which may cause catheter failure. Warning: Exceeding the maximum flow rate of 5 ml/sec, and the maximum pressure of power injectors of 300 psi, may result in catheter failure and /or catheter tip displacement.

All PowerPICC SOLO(TM) Catheters combine clamp-free infusion therapy with the simplicity of reduced flushing protocols\* to a minimum of once per week. Available sizes: 4 Fr. & 5 Fr. ...

The Bard PowerPICC Solo was developed in 2007 and was enhanced in 2008 as the Bard PowerPICC Solo2. It is designed with a kink-resistant polyurethane reversed-tapered design for over-the-wire placement. It contains 3 internal valves, all located within the hub. The larger valve is opened by a positive pressure created by gravity, a pump, or a ...

For central placement, when the tip has advanced to the shoulder, have the patient turn head (chin on shoulder) toward the insertion side to prevent possible insertion into the jugular vein. Note: The PowerPICC®;...  
Page 7 The ...

A central venous access device (CVAD) or central venous catheter (CVC) is commonly referred to as a central line. A central line is placed into the central venous vasculature and the CVAD tip is placed in the lower third of the superior vena cava or at the cavoatrial junction.

PowerPICC®; catheter has a kink resistant, reverse tapered design. Catheters are packaged in a tray with accessories for reliable long (greater than 30 days) or short (less than 30 days) term vascular access. Sterilized by ethylene oxide. Do not re-sterilize. Indications

BD is committed to providing safe and effective vascular access solutions to advance lives and the delivery of health care. By combining advances in polyurethane-material technology and manufacturing processes, BD has developed smaller-diameter\* peripherally inserted central catheters (PICCs) that maintain high flow performance for infusion therapy.
