An added benefit is that residential energy storage systems that have previously undergone the cell level test under UL 9540A can often use that test data for the UL 9540B cell test. A key difference between the UL 9540A and UL 9540B is that UL 9540B includes the purposeful ignition of vented gases during a thermal runaway propagation event.

The International Renewable Energy Agency predicts that with current national policies, targets and energy plans, global renewable energy shares are expected to reach 36% and 3400 GWh of stationary energy storage by 2050.
