SACRAMENTO - As California increases its reliance on renewable energy sources like solar and wind, there's a concern that there may not be enough energy during certain seasons and times of the ...

Renewable energy generates about 20% of all electricity in the USA -- a percentage that is continually growing, according to the Office of Energy Efficiency and Renewable Energy. Looking at energy generation, 9.2% can be attributed to wind, 6.3% to hydropower, 2.8% to solar, 1.3% to biomass and 0.4% to geothermal.

Renewable energy comes from unlimited, naturally replenished resources, such as the sun, tides, and wind. Renewable energy can be used for electricity generation, space and water heating and cooling, and transportation. Non-renewable energy, in contrast, comes from finite sources, such as coal, natural gas, and oil.
