

Recent work has suggested that macrophages may regulate adiposity, but the mechanisms underlying this process remain unresolved. Cox et al. report that a macrophage-derived growth factor, Pvf3, and its receptor on fat body cells are needed for lipid storage in fruit fly larvae (see the Perspective by O"Brien and Domingos). The mouse Pvf3 ortholog, PDGFcc, ...

(A) STLES can float and extract lithium from brines at scale using only ambient sunlight as the source of energy. PV, photovoltaic array. (B) The operating principle of STLES involves solar-driven transpiration, which creates a high capillary pressure within the evaporator. This pressure is then transmitted to the NF membrane, causing an influx of lithium ...
