Solar power is the conversion of the sun's energy into electricity. With an estimated 173,000 terawatts of solar energy continuously hitting Earth's surface (1), there is more than enough energy to meet the world's current consumption levels of 15 terawatts per year (2). The trick, though, is collecting it.

Here are some things to consider when weighing the pros and cons of solar energy before deciding whether a solar energy system is right for you. Who Should Use Solar Energy? People worldwide use solar energy, one of the cleanest and most domesticated sources of electrical energy generation. But when we consider the complete scenario, a question ...
