

Solar panel micro grid tie inverters

Grid Tie Micro Inverter. The grid-tie solar micro inverter, also called a "decentralized" inverter, is installed next to each solar panel and converts the DC electricity from that panel into AC electricity. The AC electricity is then sent to the grid in a frequency and waveform that matches that of the grid.

Unlike central inverters with high DC voltages in the hundreds of volts, APsystems microinverters tie directly to the low-voltage PV module and connect to the public power grid via standard AC voltages - enhancing worker and homeowner safety, and eliminating the possibility of high-voltage DC "arc" fires.
