When constructing a solar power plant, the critical task is to install photovoltaic modules. If due to unfavorable conditions, for example, due to heavy rains, the installation of photovoltaic modules will be delayed by two days, then the overall term of the project will shift by two days from the expected date of the object commissioning.

13. Solar collectors capture and concentrate sunlight to heat a synthetic oil called terminal, which then heats water to create steam. The steam is piped to an onsite turbine-generator to produce electricity, which is then transmitted over power lines. On cloudy days, the plant has a supplementary natural gas boiler. The plant can burn natural gas to heat the water, ...
