

Solar smart install

One of the primary reasons it makes sense to go solar is that electricity costs typically increase yearly, but your solar costs won't. Without solar panels, the average homeowner will pay more than \$60,000 in electricity bills over the next 25 years, according to EnergySage data. If you install solar panels now at an average cost of \$20,000, you can save more than ...

Ensure no other contractors or workers will be on site during your solar installation. We cannot perform the installation if other workers are on site. Someone 18 years or older must be home during the first day of installation. Most installations are completed within one day, but larger or more complex systems can take two or more days.

When you install solar, if you don't already have one, you'll get a digital "smart meter" installed and owned by your electricity retailer, and it provides the interval data that is used to generate your retail bill whether it is a ToU or Standard tariff. They're internet connected via the 4G network, remotely read and remotely operated for ...

It's the same strategy that installers have used with backup generators for decades. A smart panel offers extra flexibility. It works like an air traffic controller between your solar battery and your home's energy needs, monitoring your power usage and adjusting the power flow based on rules that you (or your installer) set in an app.

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.
